

Oil heating and cooking

It's the right choice

It's so easy-to-use, safe and economical

For a warm, cosy home with a plentiful supply of hot water for showers and baths – choose oil heating.

Over 1.5 million homes in the UK use oil for heating. It's one of the cheapest fuels available and is easier to use than solid fuel. It's also safe and extremely economical.

Oil condensing boilers are some of the most efficient you can get, which could save you money on your fuel bills. They are also extremely robust and long lasting. You can generate lots of lovely hot water for baths and washing.

Your house will stay warm through the coldest winter.

Reliable fuel supplies

With oil you have a choice of suppliers. You can either get quotes every time you need to top up your tank, or alternatively many suppliers offer pre-payment or direct debit plans. Some even use modern telemetry systems to sense when your tank needs filling up so you don't have to worry about running low on oil.

There's also a huge choice of oil storage solutions and it's worthwhile filling your tank in the Summer to ensure that you are ready for the cold Winter months when they come.

A highly efficient way to heat your home

Oil is also one of the more environmentally friendly fuels. Modern clean burning appliances have high efficiency ratings and kerosene fuel has low CO₂ emissions, which could help you save both money and the world we live in today.

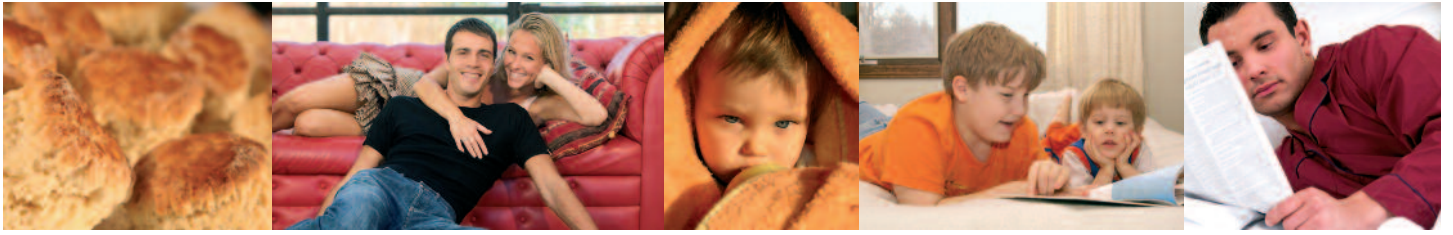

That's good news for the environment and good news for your budget

There's no beating oil heating and cooking

Oil makes good economic sense

What could be better than a traditional range cooker

And in the kitchen, what could be better than a traditional oil fired range for efficient heating and brilliant cooking.

Comparative heating costs It's so economical

Did you know that oil heating is one of the cheapest fuels for heating and cooking? And because you can change supplier at any time, you can also shop around for the best price.

With oil you can top up when prices are cheaper, and control what you pay.

Central heating costs

Figures show average costs per annum for space and water heating for a 3 bedroom house in the UK, May 2009.

Source: Sutherland Tables (Independent Analysis)

The figures for England, Wales and Scotland have been supplied by Sutherland Tables (formerly Salkent) independent analysts. The figures cover May 2009. The Sutherland figures compare running costs and do not include capital costs. LPG running cost figures include LPG tank rental costs. Condensing boilers equate to Sedbuk Band A & B ratings.

High standards for oil heating engineers

OFTEC Registered Technicians are trained to government recognised standards and carry the appropriate insurance to work in your home.

They are also trained to make sure your oil heating system is working as efficiently as possible, keeping running costs to a minimum.

Promoting excellence in oil fired heating and cooking
